Journaling is an important and widely used instructional strategy that has become increasingly popular in both face-to-face and online classes. As a reflective activity, journaling gives a voice to students, allowing them to express their views about their learning experiences. It also provides teachers with timely feedback on what went well and what needs to be improved in the learning environment.

Journaling is not a new concept. The typical journaling tool is a book or diary where students record personal experiences. Its purpose usually is self-assessment and improvement, or recording life events. More recently, journaling has been popularized in higher education for multiple purposes, such as enhancing critical thinking and raising self-awareness of learning processes.

With the onset of online learning, e-journaling has taken the place of the traditional paper-based journal-
Reflection and Journaling

The impetus to write reflectively comes from God Himself, who told Jeremiah: “Write in a book . . .” (30:2, NRSV) which highlights the importance of recording events and experiences before we forget them. “Do not forget the things your eyes have seen or let them fade from your heart” (Deuteronomy 4:9, NIV) also reminds us that recording is a way to remember.

My own experience with reflective journals began when I was a graduate student at Andrews University (Berrien Springs, Michigan, U.S.A.) more than two decades ago. One of my professors consistently required learning journals in our classes. We were to turn in the journal notebook after each class, after taking sufficient time to reflect on the learning experiences. I enjoyed the reflective learning that took place during the journal experience because it was a means of communicating what I had learned. Reflective journaling gave me time to evaluate the learning experiences as well as a chance to share my thoughts about these experiences with the instructor. This convinced me to incorporate this learning tool into my own classes, and journaling has become an essential attribute of my classroom practice in higher education for the past two and a half decades.

Reflection incorporates a blending of the mental and affective dimensions of human experiences. In the form of journaling, this reflection provides cognitive engagement that connects experiences during and after the class. Common indicators of cognitive engagement, as established by research, include students’ “use of basic cognitive strategies such as rehearsal, elaboration, organization, and critical thinking; and self-regulatory strategies such as planning, monitoring, [and] regulating.” The affective dimension of learning is also critical to address.

Student responses to the learning environment are more readily observable in a face-to-face class than in an online setting. Journaling serves as a convenient vehicle to build better understanding between students and the teacher. However, creating an appealing learning climate at the beginning of the course is critical if students and teachers are to receive the optimal benefits of journaling.

E-Journals as Tools for Learning

The purpose of reflection through e-journaling is to provide learners with opportunities to (a) connect existing knowledge and new information learned; (b) react in personal terms to information that was learned; (c) deepen learning through cognitive engagement; (d) strengthen social connectivity between the student and teacher; and (e) track learning goals. Reflections allow the learner to express emotions or thoughts that act as barriers to learning, whether from an affective perspective (feelings, opinions, ideas) or a cognitive (prior learning) perspective. E-journals provide students with a structured procedure for expressing such concerns.

In the context of online learning, reflective journals have the potential to increase teacher-student interactions and to sustain this communication throughout the course. Valuable student concerns can be shared in a non-threatening fashion. Especially important is the value of “wait-time” for interactions, as the delayed response allows more reflective thinking, compared to instant answers.

Most e-journals are asynchronous. This gives students and teachers the opportunity to think twice before responding, which allows a healthy and comfortable, two-way exchange of ideas between the student and the teacher. In both face-to-face classrooms and online, journaling enables the teacher to personalize his or her responses to each student through feedback that enhances the learning experience.

Implementing and Assessing E-Journals

Since e-journaling is a requirement in all my classes, students are given instructions on how to complete this assignment at the beginning of the term. I share what is expected in terms of content, how often the journal entries are to be submitted, and the rubric that will be used for assessment (see Table 1). The journaling assignment is clarified through two main questions students must address: (a) What important and useful ideas have I learned? and (b) What would I like to see improved
Challenges with journaling include the following: (1) the time required for reading and responding to entries with appropriate written feedback; (2) students viewing journaling as a time-consuming burden, and (3) the teacher’s exasperation at having to invest large amounts of time that should be used for class preparation, especially in larger classes.

For example, I recently had 41 graduate students in a twice-weekly Web-enhanced course. Reading and responding to 82 journals per week (twice weekly) was indeed a huge task. For this reason, a short turnaround period is my target. Generally, I respond before the next class period or weekly unit. In other words, for a face-to-face or Web-enhanced class, journal responses are given before the next class period (twice per week). For the online courses, I respond before the start of the next unit (weekly). Instructors of large online classes could assign graduate teaching assistants to assist with providing feedback. The learning-management system Moodle provides a convenient space on the platform for each journal entry. Prompt teacher response has obvious benefits such as students receiving clarification in a timely manner, and having someone who

Reflection (Learning experiences) Shares clear statements of feelings, opinions, or thoughts about the learning experiences including challenges, concerns, or questions. Shares non-specific statements of feelings, opinions, or thoughts about the learning experiences including challenges, concerns, or questions. Some feelings, opinions, or thoughts about the learning experiences are shared in the entry. Gives minimal statements of feelings, opinions, or thoughts related to the learning experiences.

Length Full page, single-spaced, one-inch margins. One-half page or more, single-spaced, one-inch margins. At least one-half page, single-spaced, one-inch margins. Less than one-half page.

Timeliness Submits the document by the due date. Submits the document by the due date. Submits the entry later than the due date by a week or less. Does not submit entry.

Provide Timely Feedback

My practice has been to require journals for every unit (eight units in all) of each online course. Since online courses generally have a course map or weekly routine such as reading/viewing and listening to the lecture, responding to forums, and turning in written assignments, journaling comes as a culminating activity for the week (if the class meets weekly). For some courses, I require journal entries to be uploaded before the start of the next class period, so classes that meet twice weekly will upload two journal entries per week. The syllabus includes the due dates for each unit journal submission. I require between half a page and a full page (single-spaced) for each journal entry.

Submission Schedules

My practice has been to require journals for every unit (eight units in...
actively listens to their writing voice and responds promptly.

Knowing that the instructor will read and respond is a major incentive for student engagement. Williams et al. noted that online student engagement increased with high teacher engagement. In this instance, engagement was identified as posting to the online forum.7 When students see that the teacher is engaged and active within the online forum, they are more likely to do likewise. For the teacher, knowing whether or not students understand the concepts being taught is essential for success. E-journal entries provide this type of data, enabling the teacher to make better decisions about how to proceed with instruction.

Confidentiality

Students should be informed about how their journal entries will be used and the degree to which they will be kept confidential. I follow the practice of private journal entries where drop boxes are provided for each unit/day of classes. Students are informed that I (the instructor) and my graduate assistants will be the primary readers of their journals. This practice helps ensure more open and personal sharing of content, reflections, and ideas. If the content of these journals is to be used as part of program and/or teacher-evaluation data collection, then students should be informed of this possibility in the syllabus. Instructors should also make students aware that postings about self-harm or harm to someone else will not be kept confidential but will be reported to the designated authorities determined by the institution, whether counselors, social workers, law enforcement, and/or administrators. (See “Administrative Essentials for Online Programs” by Janine Lim in the January-March 2018 issue.)

Using an E-Journal Template

Providing a journaling template can be helpful to students. The template identifies the essentials of the assignment, such as the identity of the student, the name of the course (as multiple courses can cause confusion), and what should be included in the text. The journal outline also could include questions and prompts to help students reflect on how they will use the ideas in their own classrooms in the future (if used in an education class); how the content relates to previous knowledge; or to discuss difficulties in grasping the concepts taught and ask for help. I use e-journals as a way to communicate with my students and to evaluate how the course is progressing. An example of the template used in my courses is provided in Box 1.

**What have you learned in this unit?**
Write about at least two ideas you learned or found interesting in this unit. (2 points)

**What would you like improved?**
Identify and describe at least two things you wish to improve personally or in the course. You may also choose to post any questions or concerns. (2 points)

Assessing Journal Entries

How to (or whether to) assess journals has been a perplexing question. I have followed the recommendation that journal entries should not be assessed.10 Instead, students are given credit for completing the entry. I usually give four points for each journal entry if the online class meets once per week. Entries submitted to the Web-enhanced course (which meets twice per week) receive two points per entry, for a total of four per week. Each submission is carefully read and feedback is sent to the student. The rubric is used mainly to evaluate the completeness and depth of the entry rather than to just indicate that it was submitted. Whether the journal is formally assessed or not, several guidelines can be helpful to instructors. English (2001), English and Gillen (2001), Kerka (2002), and Yuan and Kim (2014) offer these helpful guidelines for instructors:

1. *Treat each student’s submissions respectfully.* This includes ensuring confidentiality while setting clear boundaries. If students write something that is disturbing or share their intent to harm themselves or others, this crosses a boundary. Report it according to the school’s policies. Online programs should have in place protocols for meeting the needs of distance and online students. Make use of professional resources available on your campus such as counselors, social workers, and/or administrators to provide the student with help.

2. *Be fair.* Provide impartial and unbiased feedback. Strive to maintain this tone when responding to every entry, even hostile ones;

3. *Focus on learning.* The journal is not intended to be a therapeutic tool; it is for learning, so help students learn the difference by providing clear prompts and questions to which they must respond, and showing them how the rubric will be used to assess their entries;

4. *Engage in self-reflection.* Practice the same level of awareness you require of the students when providing responses to their e-journal submissions and when implementing their suggestions for improving the course;

5. *Provide clear expectations and guidelines* in order to avoid misunderstandings.

Preventing and Dealing With Cyberbullying

In an online environment there is always the possibility of cyberbullying—hostile communication that can
occur in the absence of face-to-face communication. Online bullying may take several forms and can be directed not only to peers in the class, but also toward instructors in the form of threats, harassment, stalking, and mobbing (see Box 2).

Online instructors may be bullied if one or more students don’t like their teaching style or question their credentials; bullying may also occur if the instructor lacks experience and does not respond to students in a reasonable amount of time, or even if the course material is deemed excessively challenging; bullying could occur because of grades, textbook selections, and any manner of student perceptions relating to the class or school policies. Online bullying can also escalate into physical violence against those being targeted. Online users may express their confusion or dissatisfaction in a variety of ways, including insults, verbal hostility, name calling, and other undesirable responses, including threats, especially when sensitive or controversial topics are being discussed.

Flaming and cyberbullying in an online course are far less likely when students can use journaling to share their concerns in a timely manner. The confidential nature of the journaling experience allows the instructor to respond directly to the student’s concern and to clear up misconceptions.

Rewards and Joys of E-Journaling

My experiences with student reflection journals in Web-enhanced and online courses has been rewarding. My rapport with students has been enhanced because the journals enable them to express confidentially their reactions to course content. They can share personal or private concerns and propose solutions. Thus, I receive prompt feedback on what is working well and what needs to be improved, and can also provide students with rapid feedback (no more than 48 hours).

Since most of my students are from the field of education, journaling tends to continue in their classes when they teach. The best reward for them as beginning teachers, and for me as their supervising instructor, however, is learning what is working well in both the classrooms in which they teach, as well as in my course. Through these reflective comments, both my students and I get a chance

---

Box 2. Cyberbullying in Online Classrooms

Eskey, Taylor, and Eskey studied factors that influence aggression toward faculty in online classrooms. In the fall 2013 semester, they contacted 550 online instructors at a liberal-arts college in the mid-western United States with a 49-question survey. Full-time and adjunct faculty respondents submitted voluntary responses. Of the 202 online faculty respondents, 103 were males and 99 were females. Collectively, this group had taught online for at least two years. In the study, respondents defined cyberbullying “as the use of electronic devices such as computers, iPads, cell phones, or other devices to send or post text or images intended to hurt, intimidate, or embarrass another person.”* These types of behaviors included:

- **Flaming:** Using angry, hostile, or vulgar language in electronic messages to instigate online fights;
- **Harassment and stalking:** Sending and resending cruel or threatening messages. Resending typically takes place when instructors do not react immediately—either because they are not prepared for the attack or they don’t know where to go to get help;
- **Mobbing:** Sending threatening, vicious messages, as a group, to a specific instructor.

**Tips for Faculty and Administrators**

1. Cyberbullying is against the law in many locations. Some countries have high penalties for cyberbullying, others have medium-to-low penalties. Check legislation for the country in which you live.

2. School policies should include prohibitions against cyberbullying. Make sure your school has a policy in place that includes cyberbullying and other forms of intimidation, and include it in your syllabus.

3. Cyberbullying policies should be shared and readily available. Make sure regular online and adjunct faculty know where to go for help.

4. Share anti-bullying information through Webinars and professional-development training.

to improve the teaching and learning process in our classes. Here are some snippets of journal entries from my graduate students in the instructional models and research classes:

• “I liked the activity in our [online] devotional, because even though we live in this wonderful place, and we can spend much time with our Creator, it is possible to forget Him and spend a lot of time in our academic activities, and we need to do that. However the most important thing in our life needs to be our relationship with God.”

• “The microteaching I did for this class was the TABA Inductive [named for Hilda Taba]. I initially wanted to do CA [concept attainment] strategy because it is fun and I think it encourages students to participate. However, I think for smaller classes, such as in my microteaching for this day, the full potential of CA strategy will not be attained.”

• “I have learned the four domains of teaching responsibility in this unit. I think it is similar to the four components of effective instruction. I also learned the pedagogical issues that are worthy of my attention. I am especially interested in learner characteristics. I just want to probe deeper into this issue.”

• “I have a question about my research paper [in another class]; can I mention some practices, methods or strategies that I observed in your classes?”

In this age of technology, teachers have an opportunity to enhance student learning through e-journaling. Though the experiences shared here are in the context of higher education, the applications shared can be adapted to fit other levels of learners as well.

Prema Gaikwad, PhD, is Professor of Curriculum and Instruction at Adventist International Institute of Advanced Studies (AIIAS) in Silang, Cavite, Philippines. She also serves as the Director for the PhD and EdS in Education programs. Dr. Gaikwad has more than 40 years of experience as an educator, has conducted numerous professional development and research seminars, and presented at international conferences. Her academic interests include the areas of professional development of educators, inclusive education, online learning, and research. She has published several articles in the areas of teaching and research, and has also collaborated in writing Bible textbooks and storybooks for the Southern Asia Division.
