This article examines the theme of hope within the context of my own spiritual positionality and my philosophical journey during a graduate course in Philosophy of Education—a course that I was completing as Barack Obama transitioned from presidential candidate to President of the United States. My transition from graduate student to professor of education coincided with a notable shift in America’s ideological climate and Obama’s presidential campaign in which hope was a central tenet. Drawing on what some may describe as primitive biblical principles, in one sense my argument reflects traditional Christianity; yet in another sense, it is far from traditional in that it espouses teachings that are no longer common in traditional, mainstream, or nominal Christianity. I frame my argument around the controversial notions of big Truths (“T’s”) and little truths (“t’s”) as tangible, yet sometimes misguided, manifestations of humanity’s nihilistic pursuit of meaning in a confusing world.

I believe this topic is important for all educators—particularly educators in higher education in parts of the world where Postmodernism has made an impact because we possess and promote varying notions of truth that collide with, create, clarify, and even confuse the beliefs of our students—many of whom no longer learn about God in public schools or at home, and who invariably wrestle with their own notions of truth. I conclude the article by analyzing my journey as a Christian scholar-educator. Unlike the American philosopher Richard Rorty, who reduces Christianity to New Testament teachings, my perspective encompasses the whole Bible as a standard for truth, hope, and wisdom in ways that many Christians, including some Seventh-day Adventists, seemingly no longer acknowledge or accept. As such, this article is as much an analysis of humanity’s philosophical pursuit of hope as it is an articulation and acknowledgement of my positionality as a non-traditional Christian academic within the context of my graduate course experience and now as a professor.

Certainly, suspicion of spirituality, religion, and faith abounds inside and outside of the academy. Scholars who see their spirituality as inseparable from their work as advocates of social justice often face challenges embracing “prophetic pragmatism” without being labeled anti-intellectual or li-
beled as closed-minded. Naming and embracing one’s position as a Christian academician can be a highly nuanced and difficult process. Drawing from my position as a self-identified non-traditional Christian intellectual, this article reveals personal elements of my philosophical encounters with Plato’s “philosopher-king.” Rorty’s notion of consensus, and discourses of hope.

Because I understood that the possibility of the language, label, and legacy of Christianity being used as “tools” for bludgeoning and beguiling the masses is as real as the God of Christianity, I cautiously began navigating through the treacherous web of opinions surrounding the origin of humanity’s philosophical dilemma: the Garden of Eden.

Ellen White explained that “It is a masterpiece of Satan’s deceptions to keep the minds of men searching and conjecturing in regard to that which God has not made known, and which He does not intend that we shall understand. It was thus that Lucifer lost his place in heaven. . . . Now he seeks to imbue the minds of men with the same spirit and to lead them also to disregard the direct commands of God. Those who are unwilling to accept the plain, cutting truth of the Bible are continually seeking pleasing fables that will quiet the conscience.”

Philosophy—which can be defined as the love or pursuit of wisdom—has always been a part of the human experience, although it transcends the existence of humanity. The biblical account of the creation and fall of Adam and Eve (see Genesis 1 to 3) suggests that this couple was not only given the responsibility of tending the Garden, but also had the privilege of learning about the intricacies of the universe directly from God.

Arguably, then, philosophy—in its purest form—has been valuable to humanity and validated by God, as long as humans did not abuse their freedom by disobeying the parameters of the Creator, the source of wisdom. In this light, Kant’s belief that laws are meant to make people free, and individuals must be free to follow the law is not new. Fritz Guy provides important context for this discussion by challenging us to consider how faith and philosophical thought can intersect appropriately within Christian education and Adventist education in particular:

“God and humanity share the ability to think. We can think about God, about the world, and about ourselves—and we can think about thinking. Because of this, our human reality is less like the reality of squirrels, cows, and chimpanzees and more like the reality of God. The more we know and understand, the more clearly and creatively we think, the more we fulfill God’s intention for humanity, created in His own image. So the expansion and extension of knowledge that is the mission of higher education need not be regarded as an enterprise that is hostile to, or even outside of, Adventist faith. Indeed, such expansion and extension can be seen as a dimension of our faith.”

Where, then, could danger lie in the human pursuit of truth(s) and knowledge? In the Bible, Genesis 3:4 and 5 outlines the deceptive introduction of the counterfeit to the human race: “Then the serpent said to the woman, ‘You will not surely die. For God knows that in the day you eat of it your eyes will be opened, and you will be like God, knowing good and evil’” (Genesis 3:4, 5, NKJV). As such, it can be contended that philosophy as we know it began with Adam and Eve’s disobedience. And since then, some have sought to explain the world and our existence, while simultaneously and systematically denigrating God to nothing more than meaningless conjecture.

Plato posited many intriguing and insightful ideas. His belief in education as the journey of the soul toward “the good” and his focus on justice were rooted in what appears to have been a sincere desire to improve the human condition. Like Plato, I believe that each person has a nature, but I disagree with him as to its quality. Plato believed that humans find happiness when they find that nature; I believe we find happiness when we allow God to change our nature because “The heart is deceitful above all things, and desperately
In a postmodern society where the prevailing sentiment is the belief in varying and independent little truths, there is a growing unwillingness by many to even consider the possibility that Truth (big “T”) exists.
While large-scale reforms and political inertia may discourage many educators from envisioning and engaging in critical practices that can heal, I am reminded that the first and most important system over which one has agency is the institution of self. We cannot lead students any farther than we are prepared to go ourselves.

Clearing Away the Blind Spots

While large-scale reforms and political inertia may discourage many educators from envisioning and engaging in critical practices that can heal, I am reminded that the first and most important system over which one has agency is the institution of self. We cannot lead students any farther than we are prepared to go ourselves.29 We must seek to know our authentic selves and be willing to utilize the pedagogical power that exists in our stories, our belief systems, our journeys, and our survival—inside and outside the academy.

Equally important, we must also consider how our truths, journeys, and belief systems can create blind spots in our lenses, teaching, and leadership. This process was crystallized during my graduate school experience and is a process that continues to inform my practice as a leader and professor. I sought to revisit revisiting the epistemological (re)awakening that occurred as part of my doctoral program, where I had time to critically consider my previous classroom experiences as a K-12 teacher (including five years at an Adventist academy) and my hopes for my future practice.

A lot has changed since I initially drafted this manuscript in the fall of 2008 as a first-year Seventh-day Adventist doctoral student navigating a philosophy of education course in a public university. As part of my professional development and spiritual accountability during that course, I chose to read The Great Controversy as parallel content (curriculum) to balance the perspectives to which I was being exposed in class.

I enjoyed The Great Controversy, and I remember with vivid detail my efforts to share it with a classmate of mine—a dreadlocked, African-American woman who was deeply spiritual and humbly inquisitive about matters of faith. My epistemological lens then—which, today, I would describe as a combination of religious arrogance and colonial ignorance—conditioned me to believe that I had much “truth” to share with her, particularly as she shared that she was courting tenets of Rastafarianism at the time.

In short, I judged her. Yet, on the night that I sought to offer a copy of The Great Controversy to her, she became the teacher. “I can’t read that,” she said, bristling back with a look of confusion at my apparent ignorance to that which she found offensive. “Look at that cover,” she continued. It was a book cover I had cracked opened numerous times but had never critically considered until she awakened me to its content: The cover was Eurocentric, and I had missed that fact.

This encounter sparked a reconsideration of my ways of knowing my faith, myself, my history, my thoughts on curriculum, my pedagogical practices, and classroom policies as a teacher, and the religious context in which I had lived out these truths—as a black male Seventh-day Adventist who was born and raised in Bermuda but was now being challenged to reflect on the totality of my journey—including my African-American lineage.
Listen actively and pay attention to students’ experiences. Students often face personal hardships that can derail their academic performance. Offer condolences, extend a deadline, direct or encourage them to seek support from a campus support service, and follow up on their progress. This is just as important as providing critical feedback on their work or having high expectations for attendance and punctuality.

Asking Critical Questions

Living, learning, and leading in these complex spaces has forced me to see and (re)envision my faith through culturally relevant lenses. I have the audacity to believe, live, lead, and teach with the hope that we can simultaneously work within imperfect schools, systems, and churches, even as we challenge and changed them for the better. The #ItIsTimeAU uprising at Andrews University and the subsequent response, to date, from the administration is a poignant and promising exemplar of this, an exemplar that I hope can make Western Adventist education and our churches better as we courageously face our underdeveloped strengths and model for the world how to respond to difference and deficits in our institutions.

Still, questions remain. For example, one must ask: What truths/Truths in our philosophical, epistemological, educational, and religious systems may be inhibiting us as leaders and educators from asking vital questions about cultural relevancy and its impact on curriculum—inside and outside of the schoolhouse? What will become of our institutions and our faith five years removed from the tragic death of Michael Brown in Ferguson, four years removed from the uprisings on the University of Missouri–Columbia campus, two years removed from the release of the #ItIsTimeAU video, and more than three years after the conclusion of a U.S. election campaign that was arguably more intense and divisive than any in recent memory, including divergent perceptions of truth, facts, and “alternative facts”? As Christian educators, we must be willing to ask critical questions, such as these:

• How comfortable are we with discussing and addressing issues of race, racism, culture, equity, and difference?
• How do our understandings and approaches to Truth/truth(s) impact our pedagogy and perspectives of students, families, curriculum, leadership, and the communities that incubate these entities?
• In a national/international context where racialized tensions and realities have boiled over, how has our pedagogy been impacted and implicated, and perhaps more importantly,
how can our classroom discourses (inside and outside the schoolhouse) positively contribute to the hope that we have as Christians—without being ignorant about or dismissive of injustice?

- More fundamentally, where do we find hope, and how do we communicate this hope each day to our students and others within our sphere of influence?

Operationalizing Intentional Practice

Like hooks,35 I now teach with the understanding that teaching is a sacred art that requires me to care for the whole student. This means being intentional in my practice and recognizing that every interaction has the potential to impact the lives of my students. Here are some suggestions based on a few examples from my own experience of how I recommend readers operationalize these principles:

1. Create a welcoming and accepting learning environment. For example, greet students by their name (properly pronounced). This is just as important as the grades they earn since it speaks to their sense of belonging.

2. Listen actively and pay attention to students’ experiences. Students often face personal hardships that can derail their academic performance. Offer condolences, extend a deadline, direct or encourage them to seek support from a campus support service, and follow up on their progress. This is just as important as providing critical feedback on their work or having high expectations for attendance and punctuality.

3. Recognize that there are differences even within similar ethnic and cultural groups. Students’ lenses, opportunities, and perspectives are shaped by their experiences, and these also impact their learning needs. I know this from my own experience as an African-Bermudian learning about the African-American experience, and the same could be said about other ethnic and cultural groups. Being sensitive to and aware of the ethnic and cultural identities of students is vital, and understanding that there is diversity within groups is even more important.

4. Cultivate an environment that is inclusive and celebrates cultural expression and excellence. For example, include imagery in curricular materials and presentations that represents a range of ethnicities and cultures. It is vital that students see themselves represented in meaningful ways. We are all God’s creation.

5. Seek to be radically balanced! Acknowledge that issues of race still challenge our “Christian” institutions; but just like our Christian walk, we must daily tread in the example of Jesus Christ. For example, this means sharing with my church congregation that if we did not consider the soul salvation of both Michael Brown and Darren Wilson (the white police officer who killed Michael Brown, an African-American male), then we must reconsider the quality of our Christianity.

Final Thoughts

My leadership and teaching are grounded in the belief that “true education . . . is the harmonious development of the physical, the mental, and the spiritual powers.”36 For me, this means understanding that Christian education is not about institutions alone; instead, it is about Christian educators in every educational context attending to the wholistic needs of individuals. The faith walk is a journey, and each encounter is a priceless opportunity to positively impact someone’s faith journey. My responsibility as a Christian educator is to love people, period. Leading with love means that I value relationship over sharing my religion, even as I am an active member of the Adventist Church.

However, I am a Christian first, and I believe that a profound love for humanity, coupled with a love for my subject matter and the power of ideas, must be present in order to teach and lead effectively.37 I concur with Freire that “teaching is an act of love,”38 and I also see credence in McLaren’s description of love as “the oxygen of revolution, nourishing the blood . . . [and] spirit of struggle.”39

As a non-traditional Christian intellectual and professor in this age of great religious intolerance and legitimate discontent with the status quo, I seek to teach with hope and love for all people.40 I refuse to run away from the critical conversations that invariably emerge in classrooms that embrace and consider the big “T’s” and little “t’s” that students bring with them to class.41 This is an audacious yet necessary undertaking—both for my students and for me, as a seeker of Truth and walking institution of healing who desires to live out my faith, hope, and pedagogy in authentic, relevant, and liberating ways in these complex times. ☞

24. Plato’s allegory of the cave is a metaphor for the impact education can have on the individual. He describes a group of captives bound together in a cave, their only reality the blank wall in front of them. A fire burns outside of the cave and casts shadows against the wall. What they see is what they believe is real. One captive is freed, and as he enters the area with the fire, his eyes must adjust to new light. Each time he is taken farther away from the cave, his eyes must adjust again. The goal of education, then, is to pull individuals as far away from the cave as possible. For more on this allegory, see “The Allegory of the Cave”: https://faculty.washington.edu/smcohen/320/cave.htm.
